THEOLOGY

4 CREDITS REQUIRED

The United States Bishops have determined that there should be a core curriculum for Catholic high schools throughout the United States so have produced a document entitled: *Doctrinal Elements of a Curriculum Framework for the Development of Catechetical Materials for Young People of High School Age*. Contained in this *Curriculum Framework* can be found the content and concepts which should form all high school religion programs: these include message (doctrine), community, worship and prayer, service, sacraments, scripture, tradition, morality, social justice, vocations, and evangelization.

Religious Education is meant to provide a developmentally appropriate, comprehensive, and systematic presentation of Catholic beliefs so that students will grow in their personal relationship with God, be knowledgeable about their Catholic faith, and integrate these beliefs and traditions into their personal lives. This religious instruction also is apologetical and is designed to help young people develop the necessary attitude, values and skills to answer or address the real questions that they face in life.

DUCHESNE SCHOLARS ACADEMY

The Scholars Academy curriculum is driven by student curiosity. As students progress through the Scholars Academy, they will gain increasing control over their education. See page 6 for more information.

Freshman Year: Freshmen will study the History of the World curriculum - a course devoted to the philosophy and history of science.

Sophomore Year: Sophomores will pursue STEM activities in a project-based learning environment. This course will focus on the science, mathematics, and engineering necessary in solving problems, as well as the design concerns that develop around presenting solutions.

Junior Year: Juniors will take an inquiry-based humanities course, in which the instructor and students collaborate to design the syllabus. Students will have a voice in the questions the class will address and the texts – ranging from literature, to works of art, to philosophical arguments - that they will study. Junior Year

Senior Year: Seniors will create a capstone project, a high school version of a university-level thesis. The capstone project will build on concepts from prior courses. Students might highlight the philosophical outlook of an author they encountered in their humanities class, or market an amusement park for the roller coasters they designed in the STEM Lab. In executing their ideas, students will encounter numerous decision points, encouraging growth and learning through trial and error.
